

The Mitchell Trestle Table

The Mitchell Trestle Table is our interpretation of this basic structure: boards spanning a braced frame.

There are many options for this design...and there are limitations, or givens.

Givens:

- The top overhangs the trestle 16" at each end. This provides knee room and room to tuck a chair most of the way under between meals. To further benefit those sitting at the ends, we provide room for toes under the arch of the base.
- 36" wide is as narrow as is practical for service.
- 80" is as short as is possible for two chairs to fit between the trestles on the sides and for someone to sit at each end.
- We cannot build this table to accept leaves.
- Tables 80–96" in length have three uprights at each trestle and one cross member between.
- Larger tables have four uprights at each end. See the photos on the back.

Options:

- You may choose the wood.
- Respecting the givens, we can build the table to suit the space and the seating. We can assist with space planning.
- You may choose from three edge treatments.
- You may choose the preparation and finish of the top: sanded or hand-planed.
