

The Paschall Leg and Apron Table

The leg of the Paschall Table is turned round below its intersection with the apron. We carve away wood on the upper outside corners of the leg so that the profile curves out to the largest diameter of turning. There is a classic, yet jaunty aspect to it.

Options:

- You may choose the wood.
- We can build the table to suit the space and the seating. We can assist with space planning.
- We can build the table with or without leaves.
- You may choose the preparation and finish of the top: sanded or hand-planed.
