

# The Phillips Leg and Apron Table

The leg of the Phillips table is tapered and shaped. The leg is not flat, but shaped into a convex surface that softens the reflected light and the touch, making both more engaging. We increase the size of the leg proportionally for larger tables.

## Options:

- You may choose the wood.
- We can build the table to suit the space and the seating. We can assist with space planning.
- We can build the table with or without leaves.
- You may choose the preparation and finish of the top: sanded or hand-planed.
